
Three best of 13 eligible held-out fits in validated families (≥5 temperatures spanning ≥300 K); median over all 13: 18.0%
measured (reference laboratory)
published calculation, uncorrected
family-calibrated, held out
temperature of a published calculation
(a)
TiSnPt (Sn-Pt)
held-out error 7.7%
(b)
LuNiSb (Ni-Sb)
held-out error 8.0%
(c)
VFeSb (Fe-Sb)
held-out error 11.4%
κ_L (W m^{-1} K^{-1})
